

TECHNICAL DATA SHEET

PUROCRYL MS -13

MEDIUM SOFT SPECIAL BINDER

Characteristics

Chemical Nature : Poly acrylate dispersion.

Appearance : White to off white liquid.

Solids content : 27±2.0 %

pH value : 6.0 – 8.0

charge : Anionic

Film Hardness : Medium Soft

Solubility : Water Soluble

PUROCRYL MS 13 is an acrylic resin which forms a medium soft covering film. It gives good covering and can be used for nappa and shoe upper finishes where a good covering is desired without loading the grain. It can be combined with **PUROCRYL S-14** (Soft Acrylic) to achieve the right blend of compact grain and covering.

SAILENT FEATURE:

Medium soft resin binder, with covering film.

Good covering without loading the grain.

Can be combined with **PUROCRYL MS 13** to get compact grain and covering.

MODE OF APPLICATION:

Suitable for shoe upper, garments and leather goods. Use level of **PUROCRYL MS-13** may vary from 100-150 parts per litre depends on the finishes.
