

TECHNICAL DATA SHEET

TERGOLIX-A

TERGOLIX- A is an amphoteric emulsifying cum dispersing agent for use in leather industry. It is based on imidazoline derivative.

CHARACTERISTICS:

Appearance	: Reddish yellow to, viscous, pourable liquid
pH	: 8.0 - 9.0
Solid content	: 40 -42 %
Dilutability	: Dilutable with hot water in any proportion. Constant stirring is required while mixing with hot water.
Stability	: Stable to acid, alkali, salt, hard water and chrome

APPLICATION:

It can be used in the pickle or chrome tannage. In the pickling it helps in dispersing natural fats and accelerates pickling process. In chrome tannage it helps in dispersion of chrome tanning salts.

Dosage : 0.5 - 1% on shaved weight.

The product can be used in main fatliquoring process for stabilising unstable fatliquor mixtures. The use of this product in main fatliquoring process produces improvement in the penetration and uniform distribution of the fatliquor.

TECHNICAL DATA SHEET

TERGOLIX-A

Dosage : 1 - 5% on amount of fatliquor.

It helps in accelerating uniform wetting back of leather and produces leveling effect on the Subsequent dyeing.

It's best use is in semi chrome tannage to disperse the natural fats applied during vegetable tannage. It thereby prevents the formation of chrome soap. It also helps in producing fine grain and drawn grain effect.

Dosage : 1 - 5% on dry weight of E.I. leather.

STORAGE STABILITY

6 MONTHS, if stored properly at ambient temperature in supplied packing.
