PUROCRYL S-23
(ACRYLIC SOFT SPECIAL BBINDER)

Page 1

Characteristics

Chemical Nature : Poly acrylate dispersion.

Appearance : White to off white liquid.

Solids content : 25 ± 2.0 %

pH value : 6.0 – 8.0

charge : Anionic

Film Hardness : Soft

Solubility : Water Soluble

PUROCRYL S-23 is a soft acrylic resin which forms a soft film with low thickness. It can be used in nappa and shoe upper Finishes to give an elegant finish with a fine grain break. It can be combined with PUROCRYL S-23 to increase coverage.

SAILENT FEATURE:

Soft resin binder, with low thickness. Gives fine grain break. Suitable for shoe nappa and upper. Can be combined with **PUROCRYL S-23** to increase the coverage.

MODE OF APPLICATION:

Suitable for shoe upper, garments and leather goods. Use level of **PUROCRYL S-23** may vary from 100-150 parts per litre depends on the finishes.
